

The IRELAND M'FG COMPANY
— 1888 —

**PUBLIC LIBRARY
OF CINCINNATI AND
HAMILTON COUNTY**

Authorized in 1853 as a Public and School Library, it became in 1867 an independent Public Library for the city, and in 1898 the Library for all of Hamilton County. Departments in the central building, branch libraries, stations and bookmobiles provide a lending and reference service of literary, educational and recreational material for all.

The Public Library is Yours . . . Use it!

J. W. BOUGHTON'S

Patent Adjustable MOSQUITO and FLY SCREENS, for Windows.

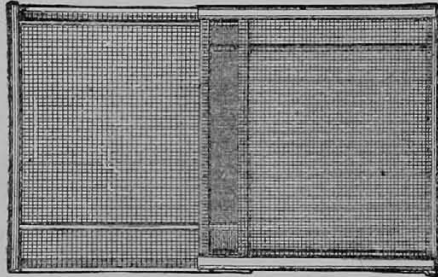

This is the **Cheapest** and **Best** Adjustable Screen ever made, and will fit any window. It is just suited to people living in rented houses, as it can be used in windows of different widths.

To adjust, raise the sash, slide the frames apart so as to fit the window, and lower the sash to the top of the screen. Keep the top slanting outside.

IT IS THE STRONGEST. BECAUSE it has a compound frame that cannot be pulled or broken apart in using.

IT WILL ADJUST EASIER. BECAUSE you can take hold of a rod and slide it back and forward in the window with one hand, which you can't do with any other.

IT WILL NOT STICK WHEN SOAKED WITH WATER. BECAUSE the sliding rod is only $\frac{3}{8}$ inch thick and slides through a $\frac{1}{2}$ inch hole.

OTHER SIZES MADE TO ORDER.

Of plain wire, 15c. per sq. ft. Figured wire, 20c. per sq. ft.

 Landscape wire, 35c. per sq. ft.

Screens are packed for shipment in crates of two dozen each.

WIRE SCREEN DOORS.

We make two sizes covered with green wire cloth complete. Stained imitation walnut color.

They can be reduced two inches in height and width, by sawing off a strip from the sides and ends, and all ordinary doors fitted from these two sizes, thus avoiding the necessity of keeping a large variety in stock. If these sizes are a little scant for irregular doors, pieces can be nailed on at the sides or ends.

SIZES AND PRICES.

2 ft. 8 in. by 6 ft. 8 in., . . . each, \$1.50

New York.

J. W. BOUGHTON'S Adjustable Knock Down Screen Frames

FOR DOORS AND WINDOWS,
TO KEEP OUT FLIES AND MOSQUITOES.

Patented
Jan. 11th, 1887.

THE LIMIT of CHEAPNESS and SIMPLICITY has been reached in these frames, as an examination of them will show. They are mortised and tenoned, and can be put together in a few minutes by any person without mechanical skill, making as good a frame as any carpenter can make, and at half the cost. They can be covered with netting for five or ten cents and with wire cloth for a few cents more.

The height of the frame is adjusted by having a long mortise in the top of each stile, in which the top rail can be raised or lowered 8 inches, and nailed fast at the required height. The width of the frame is adjusted by having at one end of each rail two long, thin saw cuts parallel with the sides of the tenon and back 6 inches from the shoulder. By sawing down to the saw cuts on either side the tenon of the rail can be moved back 6 inches and the width of the frame be reduced this much.

This cut shows the frame as sold with brackets for the corners, half round mouldings to

cover the edges of the wire, pieces to fill up the unused parts of the long DOOR FRAME COMPLETE.
Fig. 1.

mortise, wedges for the tenons and nails, with directions for putting together.
(Weight about 8 lbs. each).

Give the frames a coat of varnish before the wire is put on and they will look like solid walnut.

PACKED IN CRATES OF ONE DOZEN.

GET A SCREEN DOOR FOR YOUR KITCHEN TO KEEP OUT THE CATS

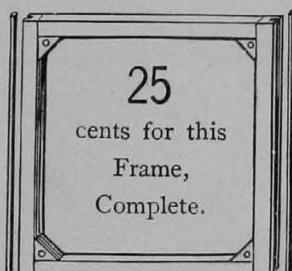

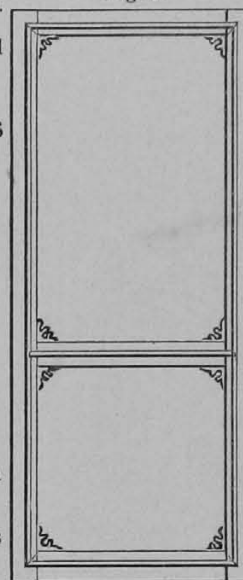

All infringements will be prosecuted to the fullest extent of the law.

PRICE LIST OF DOOR SCREEN FRAMES.

Number.	Full Size.		Can be Reduced to		Imitat'n Walnut. Per Doz.
	Height.	Width.	Height.	Width.	
300	7 ft.	3 ft.	6 ft. 6 in.	2 ft. 6 in.	\$7 80
301	8 ft.	3 ft. 6 in.	7 ft.	3 ft.	8 40

Carpenters can buy these frames cheaper than they can buy the lumber and make them.

Retail Dealers can make a good profit by using these frames and making doors and window screens to order.

PATENT KNOCK DOWN SCREEN FRAMES FOR WINDOWS.

PATENTED JANUARY 11th, 1887.

Are made on the same principal as the DOOR FRAMES, and put together in the same manner. These frames are for solid screens and slide up and down on the tongues shown in the cut, which are nailed to the sash stop. The frames are stained a perfect imitation Walnut color. Half round moulding to cover the edges of the wire, with brackets for the corners are furnished with nails to put together. Common netting can be bought for a few cents.

SIZES AND PRICES.

No. 310. 2 ft. 6 in. high by 3 ft. wide, Stained Imitation Walnut, - each, 25 cents.
No. 311. 3 ft. high by 3 ft. 4 in. wide, " " " " each, 30 cents.

These sizes can be reduced 6 inches in height and 8 inches in width.

PACKED IN CRATES OF THREE DOZEN.

THE LENGTH IS MEASURED FROM END OF ARM TO HANDLE.

ORDER BY NUMBER.

To meet the demand for a low-priced Transom Lifter, we offer "The Eagle" and "The Shield" Lifters, and respectfully solicit a sample order. As will be observed by the cut, "The Shield" Lifter has our Patent Safety Spring, without which any Lifter, when used for Transoms hinged at the bottom, is positively dangerous. The Spring, acting as a cushion, receives the shock and prevents the glass from breaking should the Transom be allowed to fall suddenly through carelessness.

LOOK FOR THE TRADE MARK ON THE HANDLES.

W. H. JACOBUS,

90 CHAMBER ST.,

NEW YORK.

PALMER'S Adjustable Sheave for Sliding Doors.

The only device in the market that provides for the adjustment of doors running on floor tracks.

Common Pattern inserted in door.

IT CAN BE APPLIED IN ONE-FOURTH THE TIME REQUIRED TO APPLY ANY OTHER.

ALL PARTS ACCESSIBLE AND EASILY REMOVED, WHEN FOR ANY REASON THERE ARE FAULTS TO CORRECT.

KEEPS THE DOORS FROM WARPING BY SUPPORTING THE BOTTOM.

STRENGTHENS THE DOOR. ITS OWN WEIGHT ACTING ON THE SLIDES AND SCREW, KEEP THE STILES FIRMLY PRESSED AGAINST THE RAIL.

PREVENTS TILTING AND DERAILING ON ACCOUNT OF BEING PLACED AT THE EDGE OF THE DOOR.

Manufacturers Represented by

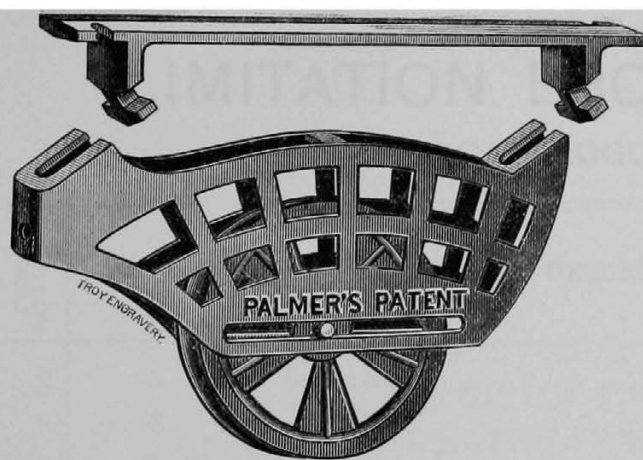

W. H. JACOBUS,
90 CHAMBERS ST., NEW YORK.

To Architects, Builders and Property Owners.

Each succeeding year, as the necessity of economizing space in buildings becomes more imperative, the want of a practical device for sliding doors becomes more apparent. Nothing on the market seems to meet the requirements. The old-fashioned floor-track sheaves, if placed near the edge of the door, greatly weaken it, and if this is avoided it is by placing them so far from the edge as to make a very narrow base of support, causing tilting, rocking and derailment. No provision having been made for their adjustment, their application consists of a series of fittings and trials to get the doors plumb with the jambs and at their meeting point, involving great loss of time and much unnecessary hard labor. Shrinking of timbers and the natural tendency of new buildings to settle, necessitates repetitions of the fitting and trying process, greatly to the annoyance of the occupants and to the expense of the property owner. During the past few years in many localities hanging from overhead has been largely resorted to. Hangers in bewildering variety have been put on the market. Of the relative merits or demerits of these devices it is unnecessary to speak. The many doors to be found slid back in their openings and their use abandoned show how they fail to meet the requirements. It would be considered very poor policy to put water pipes between finished walls where they could only be reached by tearing the walls away; yet door-hanger tracks are thus put in and are inaccessible for all time.

Our Adjustable Sheaves and the track on which they run are always accessible. There is nothing liable to get out of order, as their construction and application is exceedingly simple. They can be quickly applied by any intelligent workman, in which application there are no experiments.

One trial will satisfy you that this is the device to use for all sliding doors.

ANTI-FRICTION PATTERN.

SCREW AND NUT HOLDER.

Used for putting the screws through the Sliding Plates into the bottom of the mortise. Also to hold the nut in position inside the sheave case while connecting the adjusting screw. It is a handy tool and is always saved for odd jobs. One packed with each set.

These sheaves are made strong enough for the heaviest doors and are finished in the most approved manner. In the common pattern the axle holes are cast (not drilled), bringing them exactly opposite each other, causing the wheel to run perfectly straight and preventing contact with the sides of the case—a great improvement over drilled cases. No greater width of mortise is required than for the old style fixed sheave.

PRICES:

COMMON PATTERN.			ANTI-FRICTION PATTERN.
Size of Wheel.	Iron Axle.	Brass Axle.	Length of Run.

INDEPENDENT CYLINDER RIM NIGHT LATCH.

(Patented Oct. 31, 1882.)

No. 0700.

NO.	DESCRIPTION.	PER DOZ
0700	Heavy Black Japanned Case, Heavy Reversible Latch, Bronze Knobs, with 2 Flat Steel Keys.....	\$30 00
	Extra Keys to Latch, Finished.....	2 80
	Key Blanks.....	93

Latches packed $\frac{1}{4}$ Dozen in a Box, 10 Dozen in a Case. Key Blanks packed 6 Dozen in a Box.

THE INDEPENDENT CYLINDER

Is adjustable to any thickness of door, from $1\frac{1}{4}$ to 2 inches, and very easily applied.

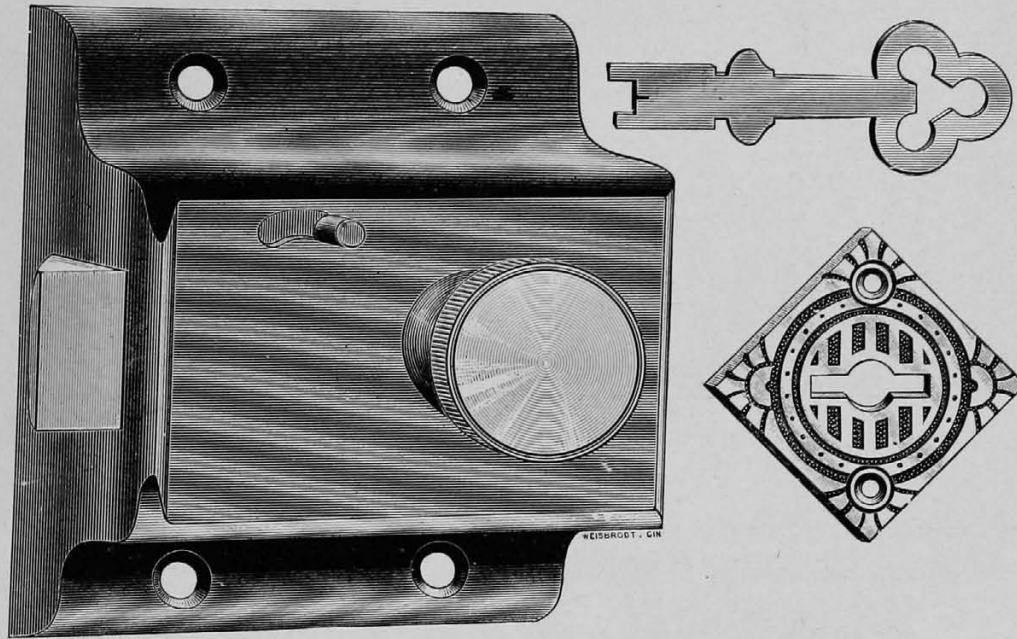

DIRECTIONS.

Bore a $\frac{7}{8}$ -inch hole $1\frac{5}{8}$ inches from edge of door; insert escutcheon from outside. After having bevelled the edges of the hole in the inside of door with a knife, insert screw thimble and screw up tight. No special wrench required; any ordinary screw driver will do the work. Then put the lock on in the ordinary way, letting the cylinder swivel which works the lock enter the hole.

Discount.....per cent.

Latches packed $\frac{1}{4}$ Doz. in a Box, 10 Doz. in a Case. Key Blanks packed 6 Doz. in a Box.

These Latches are heavy, strong, substantially made, and very safe; and being very simple in their construction, will not get out of order. They have a great variety of changes.

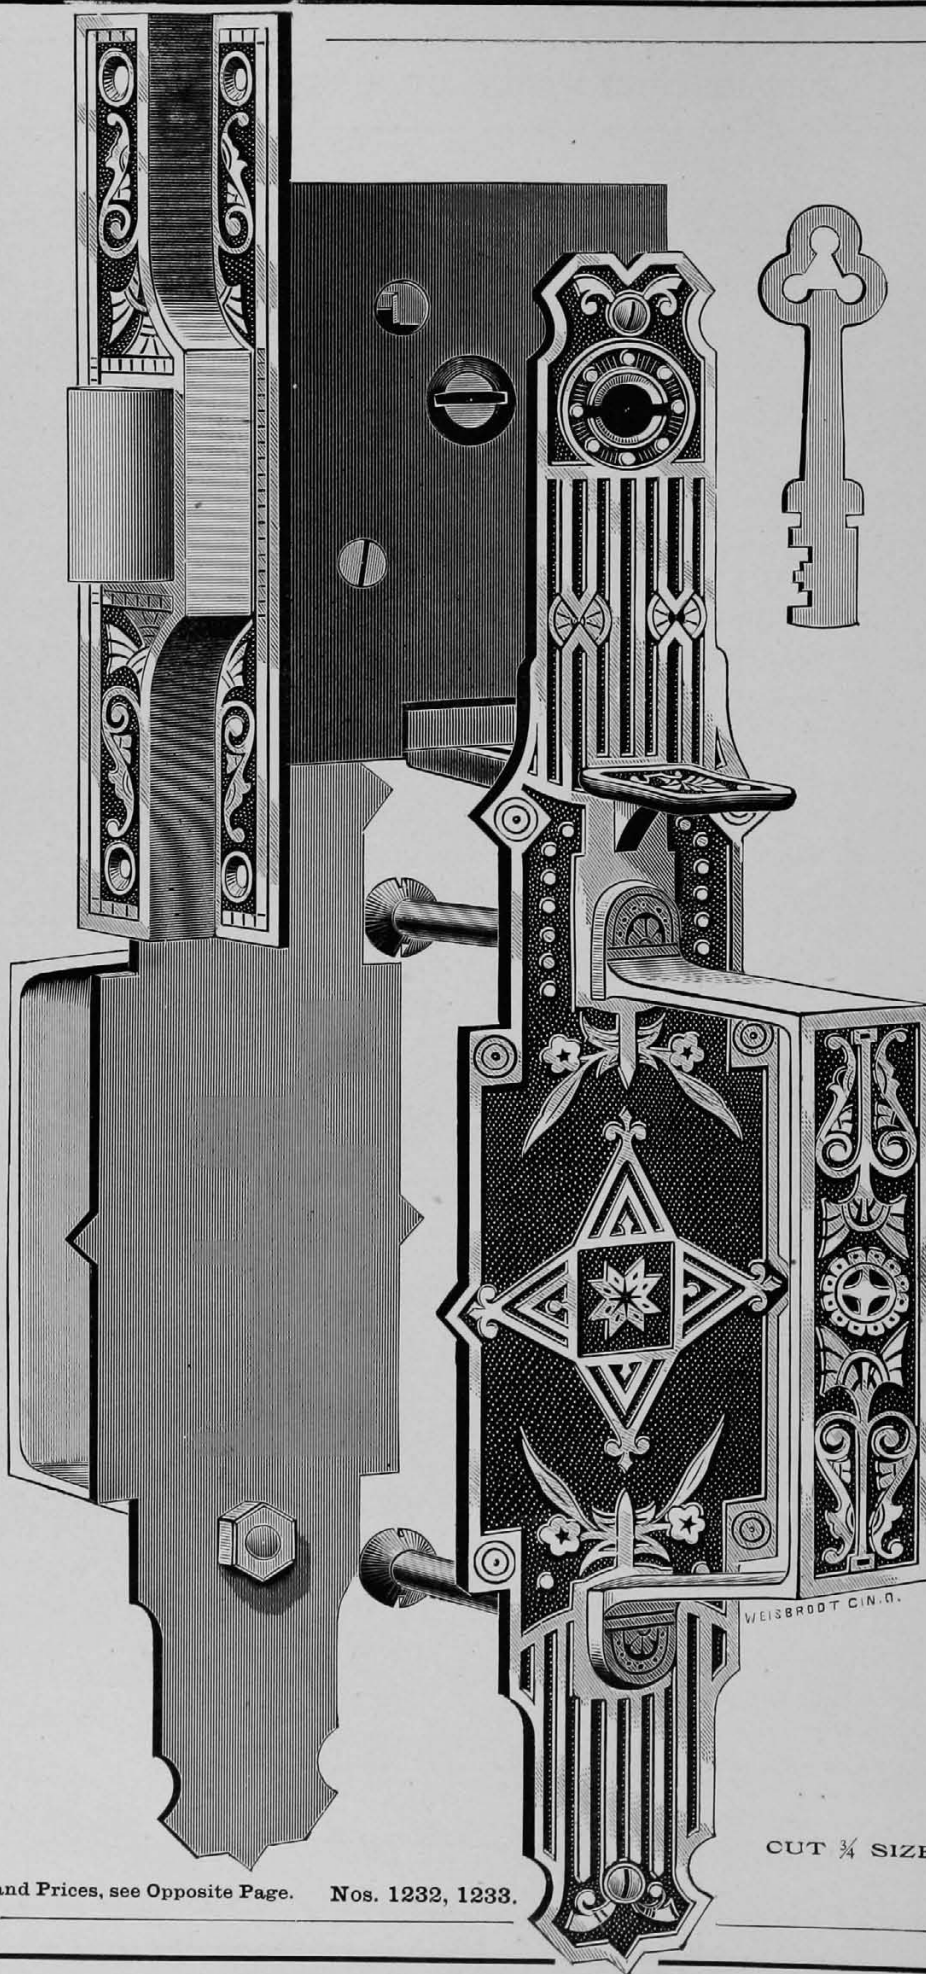

THE INDEPENDENT CYLINDER

Is adjustable to any thickness of door, from $1\frac{1}{2}$ to 2 inches, and very easily applied.

DIRECTIONS FOR APPLYING THE INDEPENDENT CYLINDER.

Bore a $\frac{7}{8}$ -inch hole 2 and 1-16 inches from the front edge of the door, and insert the escutcheon from the outside. After having beveled the edges of the hole on the inside of the door with a knife, insert the screw thimble, and screw up tight. *No special wrench required.* Any ordinary screw driver will do the work. Then put on the lock in the ordinary way, letting the cylinder swivel, which works the lock, enter the hole.

A detailed technical drawing of a decorative metal hinge or clasp mechanism. The central part is a rectangular plate with ornate, symmetrical scrollwork and a central circular element. This plate is flanked by two vertical bars, each featuring a circular end cap. The entire assembly is shown in a perspective view, highlighting its three-dimensional structure and decorative details.

BROWN'S PERFECT SHUTTER WORKER.

PATENTED DEC. 29, 1885, AND DEC. 27, 1887.

Manufactured and Sold Only by The Ireland Manufacturing Co., Cincinnati, O.

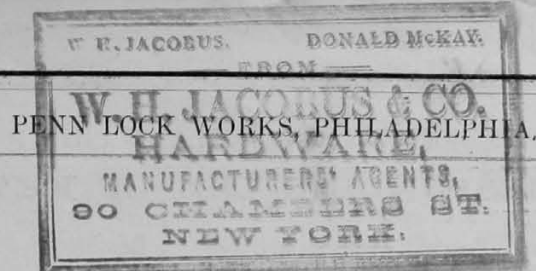

Opens and closes window blinds without raising the window; secures the blind in any position from within the house, prevents blinds from rattling or lifting off the hinges in any wind. It is indispensable for bay windows. A child can operate the blind with ease. It is purely a mechanical device, with nothing to get out of order. Can be applied with ease to any old blind, without the necessity of removing the top hinge.

NO.	SIZE.	* DESCRIPTION.	PER	SET

THE COMPOUND SPIRAL SPRING HINGE

Bommer's Patents, Nov. 7, 1876; July 1, 1879, and June 1, 1880.

SINGLE AND DOUBLE ACTION.

The following recently patented improvements, which are contained exclusively in the above Hinge, render its superiority to all others so apparent, that it will be the choice of all who prefer an article of merit, especially if they can buy it for a lower price.

COMPOUND SPRINGS.

Within the spring of each Hinge, there are one or more auxilliary springs, while greatly increasing the power, this arrangement gives such elasticity to the springs that the heaviest door may be opened to its full extent without exertion, and will close without slamming. It has been the aim of all inventions in this line to obtain the greatest power within the smallest space; that this result could be combined with a lighter and more elastic movement than heretofore obtained, was not thought possible; IN THIS HINGE BOTH THESE RESULTS ARE ACCOMPLISHED FACTS.

A GAUGE FOR FASTENING DOUBLE ACTING HINGES.

Consisting of a shoulder on the upper and lower ends of the side flanges, of the exact depth to which the Hinge should be let in, enabling anyone who can fasten a common butt, also to fasten this double acting Hinge with greater success, than the most skillful carpenter can have with other Hinges.

Spiral Springs for all purposes and of all sizes, made to order.

FARMER'S COMMON SENSE FRAME PULLEY.

TO MANUFACTURERS AND BUILDERS.

This pulley can be applied so much more rapidly than those commonly used that, as will be readily seen by the above comparisons, which are average results of actual tests, that no manufacturer or builder could afford to use the old style if they could be furnished him free of cost, as the cost of this pulley *in the frame* is less than half the cost of the other when so applied.

Our pulley makes a handsomer and better frame than any other, enabling the manufacturer to fill orders more promptly, and when frames are shipped in the knock down, pulleys can be left out until destination is reached, making the jambs pack much closer and insures delivery in good order. It is only a moment's work to drop the pulley in place and put in the screws.

No special tool or machine is required.

A center bit for hand boring and an auger bit for machine boring are all the tools needed. Bore the three center holes through and the two end holes deep enough to let the face of the pulley into and flush with the jamb, and a mortise is produced exactly fitting face of pulley. It is perfectly clean, and even the holes for the screws are made by center or screw of bit used in making the mortise. Die on edge of each pulley for marking the hole centers which are all marked at one operation by a light tap of the hammer. By means of this improvement we accomplish all that can be done with an expensive special machine and special pulleys, and save the original outlay for such machine, besides room, power and repairs, and the undesirable side cutting bit, and enable all to very successfully compete with those using such machines or any known device used for this purpose.

To manufacturers and builders, no matter what kind of pulley you use or how you apply it, do not hastily conclude that the inducements offered you are insufficient to warrant your attention. We offer you a practical, simple, labor and time saving article. Consult your own interests, give our pulley a fair trial, and you will find it will pay the best returns of any investment you can make.

For Shipping Clerks, Accountants and others.
